# **Compiler Construction**

## **Chapter 1**

## Scanning and Parsing

Aho et al. in their highly popular textbook on compiler construction [1] introduce

- (i) scanning and
- (ii) parsing

as the first two phases in compiler construction.\*1 Hopcroft and Ullman [2] provide the theoretical foundation for scanning and parsing. In **Chapter 2** we examine the later phases.

<sup>\*1</sup> The other three phases are (iii) semantic analysis, (iv) code generation, and (v) code optimization.

## Chapter 2

## The Later Phases
